**MONIKA PATODI
INTERIOR DESIGNER**

Interior acoustics support the well-being of the users. The design of the spaces that require a sound quality needs specific elements to embolden the acoustical quality. ... These elements start by the space layout, which should be architecturally created to the specific function to prevent any basic problems.

Acoustics and Interior Design

Architectural acoustics is both an art and science. Acoustic features in interior spaces is as important as in a public space. Acoustic values must be considered both at the construction stage as well as at interior design/decoration stage. Surprisingly but naturally most of us realize this only after occupancy. This makes the job of interior designers more important as well as more complicated and challenging.

IN THIS CONTEXT STUDENTS WERE TAKEN TO VISIT SANMATI SCHOOL AUDITORIUM AND WERE TAUGHT HOW EXECUTE ACOUSTICAL MATERIAL.
