WORLD EARTH DAY

World Earth Day is also known as **International Mother Earth Day**, is celebrated every year on **22nd April**. The Day will be celebrated all over the world to spread awareness for Earth's wellbeing and to encourage people to support environment protection .The day focuses on the global climate crisis that is worsening with each other passing day. World Earth day 2022 will mark the **52nd Anniversary** of the day since it started being observed in 1970. Earth Day was renamed officially by the UN in 2009 as International Mother Earth Day.

On Occasion of World Earth Day 2022, with the theme of '**Invest In Our Planet**'. Environmental Consciousness Club-**SEES** Conducted an event Including (Awareness through documentary, Poster making, Tree Plantation) in the presence of **Dr. Ram Narayan Singh Professor & HOD of SEES , Professor Dr. Rubina Chaudhary.**

1 .Awareness through documentary.

In this activities student of M.tech Energy Management(2021-2023) have learned that the captivating documentary majorly focusses on the timeline of the plastic pollution crisis. Exposing the ugly truth behind plastic pollution and false solution of plastic recycling, the documentary highlights the excessive environmental damage that it causes along with the human rights abuse that occurs throughout its production. This life-changing documentary shines light upon one of the most pressing environmental issue, making it a must watch on World Earth Day.

2. Poster making

Teaching about pollution is an essential part of Earth Day because it helps students understand the consequences of not protecting the Earth. It can be much easier to prevent pollution than to remedy it later. Students can experience the effects of pollution on a small scale in the classroom.

3. Plantation.

We have planted fruit bearing and shaded trees like (Java Plum, Mango, Guava, Fig ,etc).The trees give off oxygen that we use to breath. Trees decreases the amount to stormwater runoff, which decreases erosion and pollution in our waterways and may diminish the effect of flooding. Trees increases the organic content of soil as well as maintains Carbon dioxide level.
