INTERNATIONAL CONFERENCE

**"Scientific Impact of  
Music and Environment  
on Sustainable Development"**

## Introduction

The greatness of ancient Indian vedic literature is infinite and astounding. Vedas have quoted facts that have stood the test of time and mankind since ages. No ancient civilization in the world has clearly postulated the norms of music as done by our scholarly rishis. In fact, it was the Vedas that introduced music to the world and unfolded its benefits for the betterment of human beings and the society. Vedic scholars had such in depth knowledge of music that they could challenge the forces of nature by causing rains, thunder storms and earthquakes through music. Vedic music is eternal and mesmerizing, it helps to keep the mind and body in harmony with the rhythm of nature and divinity. Ancient texts reiterate the mental, physical, biological and holistic effect of music on living beings and the environment. Indian mythology has associated several musical instruments with the deities like Lord Shri Krishna with the flute and the conch, Lord Shiva with the pellet drum, Maa Saraswati with the veena and sage Narada with the tanpura. The sound vibrations of these musical instruments were selected to be in tune with the specific frequencies that balance their cause and effect.

With the onset of westernisation and modernisation, the time tested vedic facts have been diluted and overlooked thereby leading to the prevailing ills in living beings and the environment. The need of the hour is to revive and reinvigorate the vedic principles for the benefit of mankind and the society. Organizers have taken a giant leap in this direction of benefitting the environment and the society by organizing ANUBHOOTI- an international conference that could bring illustrious scholars, researchers, academicians and students on a unique distinguished platform. ANUBHOOTI is aimed at providing an opportunity to review and project the vedic facts with a scientific base for sustainable development of the society.

## Focal Theme

The conference will encompass deliberations by expert musicians, scientists and environmentalists from the field of traditional and classical music along with stalwarts from the scientific fraternity. The conference aims at disseminating its focal theme through key note addresses, panel discussions, plenary sessions supported by oral and poster presentations of research papers. Effective propagation of the focal theme will be further consolidated through impressive exhibitions, cultural and musical concerts. These well planned and deftly executed programs will strike the right note among the conference attendees and drive home the impact of music on environment and sustainable development.
